FULLY AUTOMATIC PACKAGING SYSTEM

# AUDION 1075 ROLLBAG

## 1075 ROLLBAG TECHNICAL SPECIFICATIONS

The fully automatic **1075** is designed for ease of use and high productivity with many of the same features found on larger more expensive systems. The basic model includes automatic bag advance, perforation detection to insure proper bag location for product feeding, two stage pneumatic bag opening, foot pedal activated sealing or automatic cycling, and automatic bag (perforation) separation. Available controls range from simple integrated electronics with digital display to full featured PLC with LCD character or graphics displays. The controls are among the most advanced, reliable control systems available on the market today. In addition to the control options above, the **1075 Rollbag** offers such options as sorting table, product feed funnels, in-line characters on graphics printer, bag supports and a variety of automatic feed or actuation options.

The **1075** is designed with the latest in operator safety and serviceability features. A pneumatic safety release system prevents the system from going to high pressure if anything interferes with the closing of the seal bar.

Digital PLC Display

Optional Sorting Table

### Technical Information 1075 Rollbag

Electrical	115v / 60 Hz
Minimum Bag Size	2" x 2" ( 5 x 5 cm)
Maximum Bag Size	10"W x 12" L (25 x 30 cm)
Unit Dimensions	30"L x 22"W x 23"H" (76 x 56 x 59 cm)
Shipping size	25"L x 30"W x 34"H (64 x 76 x 86cm)

#### Standard Features

- Table Top Design - Small Footprint
- Constant Heat Sealing - Up to 30 Bags/Min
- Advanced Bag Loading and Threading System
- Logic Controller with LCD Display
- Digital Temperature Controller with PID Capabilities
- Maintenance Free Seal Bar - No Teflon curtain to or replace
- 4.25" Jaw Opening - Provides easy product loading
- Manual or Automatic Cycle Operation
- Foot Switch Control of Manual Cycles
- Seal Bags From 2" Up to 10" Wide
- Adjustable Two Stage Pneumatic Bag Opening System
- Externally Mounted Air Filter/Regulator for easy maintenance
- Seal Jaw Safety Release System - Prevents system from going to high pressure, if anything interferes with the closing of the jaw seal
- Bag Counter
- Strip packaging

#### Requirements

- 115VAC/60HZ/3 AMPS
- 80 PSI @ 3 CFM

#### Options

- Sorting Table
- Funnel
- Printer
- Floor Stand
